

한국형 안전하고 빠른 코로나19 검사방법

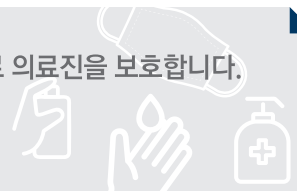

코로나19 팬데믹 상황에 한국에서는
드라이브 스루 검사센터를 운영하여
자동차 안에서 안전하게 검사합니다.
해외 주요국에서도
드라이브 스루 검사 방법을 도입하여
코로나19 검진에 박차를 가하는 중입니다.

한국에서는 작은 공간이나 차를 이용할 수 없는 경우에
“K-Walk-Thru (K-워크 스루)” 검사센터를 운영합니다.

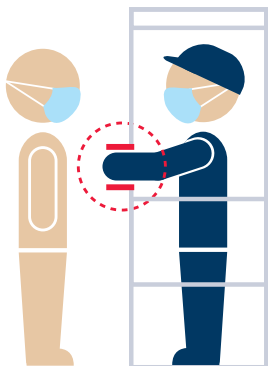

K-Walk-Thru는 의료진과 환자의 접촉을 최소화하고, 최소한의 보호장비로 의료진을 보호합니다.
K-Walk-Thru는 소독시간이 줄어 검사시간을 단축할 수 있습니다.

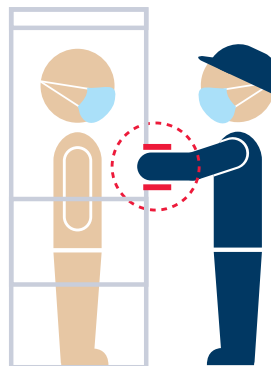

1 양압식

(내부) 의료진 (외부) 환자

2 음압식

(내부) 환자 (외부) 의료진

진료환경에 따라
의료진이 부스 안에서 외부의 환자를
검사하는 양압식과
외부에 있는 의료진이 부스 안에 있는
환자를 검진하는 음압식이 있으며,
두가지 방식을 혼용하여 선택적으로
사용할 수도 있습니다.

Korea's Quick & Safe Covid-19 Testing

Korea has set up **Drive-Thru** COVID-19 testing stations nationwide to effectively screen potential patients and to keep them from infecting others.

- Drivers can get checked out without having to leave their cars.
- Many countries have adopted similar drive-thru testing system to flatten the curve.

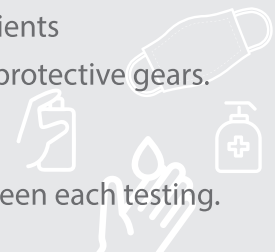

Korea has adopted new "**K-Walk-Thru**" testing system to provide testing station for potential patients without cars and in smaller areas where cars cannot approach.

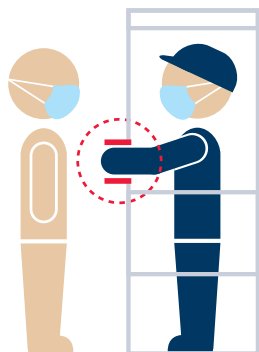

K-Walk-Thru system minimizes contact between medics and patients while providing better protection to medics even with minimum protective gears.

K-Walk-Thru system reduces testing time to less than 3 minutes by shortening the preparation time for cleaning & sanitizing between each testing.

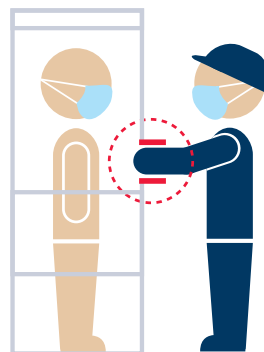

1 Positive Pressure Booth

Medics inside, Patients outside

2 Negative Pressure Booth

Patients inside, Medics outside

1 Medics can test potential patients from inside a booth while patients walk through the booth on the outside.

2 Patients can go inside the booth while medics testing from the outside.

It is also possible to combine two types and use them alternatively.
